IN THE CLAIMS

1. (Currently Amended) An organic semiconductor material comprising a compound having a substructure represented by Formula (10):

Formula (10)

$$\frac{}{} \left(A^{1} \right)_{n^{1}} \left(B \right)_{n^{b}} \left(A^{2} \right)_{n^{2}} \left(A^{3} \right)_{n^{3}}$$

wherein B represents a unit having an unsubstituted thiazole ring selected from the group consisting of Formula (11), Formula (12), and Formula (13),

Formula (11)

Formula (12)

Formula (13)

wherein R represents a hydrogen atom, A^1 and A^2 each independently represent a unit divalent linking group having an alkyl group as a substituent, A^3 represents a divalent linking group, n^b represents an integer of 1 - 20, n^1 and n^2 each independently represent an integer of 0 - 20, and n^3 represents an integer of 0 - 10, wherein at least one of n^1 , n^2 , and n^3 is an integer of 1 - 10 or more.

2.-4. (Cancelled)

- 5. (Original) The organic semiconductor material of claim 1, wherein, in Formula (10), B represents a unit having plurality of thiazole rings connected consecutively, and at least one of n^1 , n^2 and n^3 is an integer of 1 or more.
- 6. (Original) An organic transistor having the organic semiconductor of claim 1 in an active layer.
- 7. (Original) A field effect transistor comprising an organic charge transport material and a gate electrode directly or indirectly contacting with the organic charge transport material, a current in the organic charge transport material being controlled by a voltage applied between the gate electrode and the organic charge transport material,

_____wherein the organic charge transport material is the organic semiconductor material of claim 1.

8. (Original) A switching element comprising the field effect transistor of claim 7.

9. (Currently Amended) An organic semiconductor material comprising a compound having a thiazole moiety represented by Formula (1), (1-1), (1-2), (1-3), (1-4), (2-1), (2-1), (2-2), (2-3), (2-4), (3), (3-1), (3-2), (3-3), (3-4), (4), (4-1), (4-2), (4-3), or (4-4):

Formula (1)

$$A^4 = (A^1)_{n1} (R_{N})_{n4} (A^2)_{n2} (A^3)_{n3} R_{N}$$

wherein R represents a hydrogen atom, A^1 and A^2 each independently represent a unit divalent linking group having an alkyl group as a substituent, A^3 represents a divalent linking group, A^4 and A^5 each represent a substituent, n represents an integer of 1 - 10, n1 and n2 each independently represent an integer of 0 - 20, n3 represents an integer of 0 - 10, and n4 represents an integer of $\frac{1}{202-20}$, wherein at least one of n1, n2, n3 is an integer of 1 or more,

Formula (1-2)

$$A^4 = \begin{pmatrix} R \\ N \\ S \end{pmatrix}_{n4} \begin{pmatrix} A^3 \end{pmatrix}_{n3} \begin{pmatrix} A^5 \\ A^5 \end{pmatrix}$$

wherein R represents a hydrogen atom or a substituent, A^3 represents a divalent linking group, A^4 and A^5 each represent a substituent, n represents an integer of 1-10, n3 represents an integer of 1-10, and n4 represents an integer of 1-202-20,

Formula (1-3)

$$A^{4} = \left(\begin{pmatrix} R \\ N \\ S \end{pmatrix}_{n4} (A^{2})_{n2} (A^{3})_{n3} \right)_{n}^{2} A^{5}$$

wherein R represents a hydrogen atom, A^2 represents a <u>divalent linking group unit-having</u> an alkyl group as a substituent, A^3 represents a divalent linking group, A^4 and A^5 each represent a substituent, n represents an integer of 1-10, n2 represents an integer of 1-20, n3 represents an integer of 0-10, and n4 represents an integer of 1-202-20,

Formula (1-4)

$$A^4 = \left(A^1\right)_{n1} \left(\begin{array}{c} R \\ N \\ S \end{array}\right)_{n4} \left(A^3\right)_{n3} R A^5$$

wherein R represents a hydrogen atom, A^1 represents a <u>divalent linking group unit-having</u> an alkyl group as a substituent, A^3 represents a divalent linking group, A^4 and A^5 each represent a substituent, n represents an integer of 1-10, n1 represents an integer of 1-20, n3 represents an integer of 0-10, and n4 represents an integer of 1-202-20,

Formula (2)

$$A^{4} = \left(A^{1}\right)_{n1} \left(\begin{array}{c} R \\ N \\ S \end{array}\right)_{n2} \left(A^{2}\right)_{n2} \left(A^{3}\right)_{n3} A^{5}$$

wherein R represents a hydrogen atom, A^1 and A^2 each independently represent a <u>divalent</u> linking group unit having an alkyl group as a substituent, A^3 represents a divalent linking group, A^4

and A^5 each represent a substituent, n represents an integer of 1 - 10, n1 and n2 each independently represent an integer of 0 - 20, n3 represents an integer of 0 - 10, and n5 represents an integer of 1 - 20, wherein at least one of n1, n2, and n3 is an integer of 1 or more,

Formula (2-2)

wherein represents a hydrogen atom or a substituent, A^3 represents a divalent linking group, A^4 and A^5 each represent a substituent, n represents an integer of 1 - 10, n3 represents an integer of 1 - 10, and n5 represents an integer of 1 - 20,

Formula (2-3)

$$A^{4} = \begin{pmatrix} R & S & S & A^{2} & A^{3} & A^{5} & A^{5}$$

wherein R represents a hydrogen atom, A^2 represents a <u>divalent linking group unit-having</u> an alkyl group as a substituent, A^3 represents a divalent linking group, A^4 and A^5 each represent a substituent, n represents an integer of 1-10, n2 represents an integer of 1-20, n3 represents an integer of 0-10, and n5 represents an integer of 1-20,

Formula (2-4)

$$A^{4} = \begin{pmatrix} A^{1} \end{pmatrix}_{n1} \begin{pmatrix} R \\ N \\ S \end{pmatrix}_{nS} \begin{pmatrix} A^{3} \end{pmatrix}_{n3} A^{5}$$

wherein R represents a hydrogen atom, A^1 and A^3 each represent a <u>divalent linking group</u> unit-having an alkyl group as a substituent, A^4 and A^5 each represent a substituent, n represents an integer of 1-10, n1 represents an integer of 1-20, n3 represents an integer of 0-10, and n5 represents an integer of 1-20,

Formula (3)

wherein R represents a hydrogen atom, A^1 and A^2 each independently represent a <u>divalent</u> linking group unit-having an alkyl group as a substituent, A^3 represents a divalent linking group, n1 and n2 each independently represent an integer of 0 - 20, n3 represents an integer of 0 - 10, n4 represents an integer of 1 - 202-20, and n represents a number of repeating monomer segments or a degree of polymerization in a polymer, wherein at least one of n1, n2, and n3 is an integer of 1 or more,

Formula (3-2)

$$\left\{ \left(\begin{array}{c} R \\ S \end{array} \right)_{n4} \left(A^{3} \right)_{n3} \right\}_{n}$$

wherein R represents a hydrogen atom or a substituent, A^3 represents a divalent linking group, n3 represents an integer of 1 - 10, n4 represents an integer of 1 - 202-20, and n represents a number of repeating monomer segments or a degree of polymerization in a polymer,
